

Who are we?

Ixia is a leading supplier of converged network and application performance testing solutions for network equipment manufacturers, service providers, enterprises, and government agencies. Ixia's test and simulation platforms use powerful and high-performance technology to validate and measure a broad range of wired and wireless technologies, including IP and 3G/LTE networking equipment.

Ixia's testing solutions generate realistic, media-rich traffic and simulate advanced network topologies in order to stress routers, switches, and converged network appliances. Ixia provides the most comprehensive solutions for testing converged IP services from the wireless edge to the Internet core.

July 4th

12:00
Room 363

OPENINGS

Windows Software Developer:

- Develop middleware and GUI
- Use latest C#/C++ techniques and tools
- Applications design, OO design, XML, WPF

Linux Software Developer:

- Develop highly scalable networking protocols
- Build applications in C/C++
- Kernel/user-space programming

QA Engineer:

- Design, develop, and execute Ixia-based test plans and test cases for different networking standards (layers 2/3 or 4/7) on Ixia systems
- Knowledge of routing protocols; CCNA certificate is an advantage
- Configure & debug networking devices; knowledge of protocols decoding tools

INTERNSHIP PROGRAM

We are looking for smart, enthusiastic people, interested in learning about development and testing software applications.

• **Software Developer intern:**

- Analytic person with good programming skills (Linux-C/C++; Windows-C#/C++), interested in learning advanced programming techniques, tools, and technologies

• **QA intern:**

- Detail-oriented person with good networking skills, willing to learn about software life cycle and to enrich networking knowledge.

If you want to join our team, please send your resume at ixro-hr@ixiacom.com
